

Leading Innovation: Validated Dual UV Filter Assay (Bemotrizinol & Bisocetrizole)

Certified Laboratories is among the first U.S. laboratories to validate a Dual UV Filter Assay for Bemotrizinol (Tinosorb S) and Bisocetrizole (Tinosorb M) — a testing method that enables the simultaneous quantification of two advanced SPF UV filter actives.

This fully validated method offers:

- 7-minute run time per analysis, ensuring high throughput and fast turnaround.

- Compliance with ICH Q2(R2) guidance, helping ensure reliability and regulatory alignment.

- Dual-analyte capability, analyzing both Bemotrizinol and Bisocetrizole in a single run.

Disclaimer: Bemotrizinol is expected to receive FDA approval for OTC use in March 2026. Bisocetrizole is not approved in the U.S.
